Software Developer - Independant, Hong Kong

2019 June – Present

As a part of joint venture, developed and now testing data extraction/communication module to interact with video streaming facial recognition system, transform and massage extracted data and store them in the database. Revamping an old Time & Attendance web application based on Asp.net Webforms to new version in phases. The first phase is to upgrade the existing solution to be responsive and improve on UI/UX using Bootstrap and Angular JS. The second phase is to migrate the solution to Asp.net core to support cross platform deployment.

Configured Azure Devops for CI/CD pipeline and hosted test web application in Azure VM at the following link: http://www.shhuffle.com/TAWebAngularUI/
Rebuilt most of the UI according to theme and color codes suggested by the design team, now currently working on the backend API using Asp.net Core MVC. (Asp.net Core, Angular)
